## PROJECT SPECIFICATIONS/INFORMATION

### Description:

The Wathen Castanos European Grove Sub-Division in Fresno, California selected the Grasscrete System for their emergency access areas. Grasscrete Molded Pulp Formers were utilized for this project due to their 100% recycled content and ability degrade over time into the sub-soils. The project was completed over the course of several hours on two separate days due to the Molded Pulp Formers ease of use. The initial day was spent on preparing the area to receive the Grasscrete, laying the formers with reinforcement and then pouring the concrete. The former tops were removed and the concrete washed down the second day.
